

Enhancements

AR:

-Batch Edit

- Added: Error logging & additional processing for tax and service charge to ensure detail records are rounded and balanced
- Fixed: Batch date combo box to retain time stamp to be saved on all batch detail records
- Fixed: Revenue code column on the Batch Entry screen to reset on each new line so that the user can type in the revenue code for every line instead of just the first line
- Enabled: Backspace key in the ticket number field on the batch entry screen
- Enabled: Special character #,\$,%, and * to be entered in the ticket number field on the batch edit screen

-Account Detail

- For members with food minimum cycles that end in the middle of the billing period the account screen will display spent/unspent data for the current minimum cycle and the next minimum cycle.
- Fixed: Insert for event codes setup
- Added: Functionality to save column widths for each user for the Balances, Minimum, and Account Detail and Spending categories grids.

-Mass Billing/ Mass Credit Card

- Made all columns on the Mass Credit Card billing screen sort able, and for each user the screen will remember the last column sorted and whether it was ascending or descending and use that sort every time the form loads
- Added: Multi-character search for revenue code dropdown on mass billing
- Added: Row count to Mass Billing results grid
- Added: Column sort to Mass Billing results grid

-Month End

- Added: Option when printing statements to include or exclude balance forward in first subtotal
- Added: More descriptive labels to month end data check process
- Added: Functionality to speed month end process up to prevent time out issues

Membership:

-Member Look up:

- Added: Additional error coding was added to avoid letting the user click through and save a member that already exists
- Added: Nicknames to prospects and members
- Made the drop downs for Member Name look up include middle initials and suffixes

Catering:

-Event Detail:

- Added: Additional code to verify all event information prior to the event being printed and saved
- Added: Multi character search for correspondence options such as send email and create word document. When the small frame is open to select the contact the combo boxes are now a multi-character search.
- Added: The option to include or exclude dependents in the list.

POS:

-Terminal:

- Added: Option to print item on the member ticket from the POS terminal
- Added: Option under membership that will allow the user to configure how they want the names to appear in the POS terminal
- Removed: Limitation for retendering, that forced the user to print the ticket before the retender info was removed from the ticket
- Fixed: Time lapse between periods

-Manager:

- Added: Verification that a user cannot setup and save a menu item without a revenue code or wildcard
- Added: Functionality to lock the area/period price detail columns. User cannot change the revenue code in that area/period if user defaults is checked.
- Added: Functionality to clear the item options check boxes when adding a new item.
- Modified: Revenue codes dropdowns to be sorted by code.

Misc:

-Guest Interfaces:

- Added: Option for user to defined Guest Error log file and a path to allow the club to designate where they want the Guest Error logs to write
- Added: Hotel Concepts interface
- Added: Interface for Hotel concepts to PSK
- Added: Hotel Concepts to Interface Scheduler
- Implemented: CYMA 10 interface
- Statement Exporting: Fixed the statement export so that it now exports with the consolidation codes
